

Work Flow

- 1) Reading Configuration File
storing configuration file values in config
- 2) init function call
setting log flag
Database driver connection establishment
Getting connection response
Checking max connection in mysql
Setting Connection life line
Database driver connection response
database Connection to Handler
Passing sql connection to http handler
creating and setting router object
Now RestApi Server is in listen and serve mode
- 3) Now user can make API call from server using any API call utility application like curl, postman etc.

DFD OF RESTAPI APPLICATION DESIGN
